maximilian.codes 🌐

I just love to build cool shit.

I am a big believer in the web and in the openness and inclusiveness it represents. I love to learn about cutting edge technology and programming paradigms. I take a lot of pride in the work that I do. Including the quality of code as well as crafting usable and frictionless UI/UX. I love tinkering and experimenting on side projects, which can either be sparked from curiosity for a new technology/framework or a personal interest in the product.

Skills

React, TypeScript, JavaScript, NextJS, NodeJS, PWA, Electron, TailwindCSS, Radix, Firebase, Supabase, OpenAPI, Redux Toolkit

Work Experience

Senior Software Engineer at UsabilityHub
May 2022 - March 2023 | Melbourne, Australia (Remote)

I helped deliver various projects, while also moving some key migrations along. Coming from a pure Ruby on Rails, the team had started migrating to an SPA, but still had a lot of routes rendered by ruby. I helped push older routes from ruby to SPA and lay the groundwork for separating the frontend from the backend.
Senior Frontend Developer at Rexlabs
June 2020 - May 2022 | Brisbane, Australia

I helped develop the frontend application for a new property management platform. My main tasks were implementing features and looking after the code.

I later joined the core frontend team, which looked after core packages for our frontend applications, such as design system components and tooling.
Senior Frontend Developer at SatoshiPay
October 2018 - February 2020 | Berlin, Germany

While at SatoshiPay, I worked on a couple of prototypes, one of them being the browser wallet which enables a fast and instant payment mechanism using blockchain technologies.

The other prototype allows businesses to send and receive instant cross border payments, also using the Stellar Blockchain.

Frontend Developer at Hubrick
April 2016 - July 2018 | Berlin, Germany

Hubrick was a truly special place to work. I learnt a tremendous amount in a very short period of time.

The project itself consisted of a lot of microservices on the backend and a single page React application on the frontend.
